Test Case# Test Script# Test Script Step#	Test Data	Exception Description
#1	9 Current Dresses in Stock	After attempting to sell more than 9 dresses, the product is not marked "out of stock" this could either be because the trigger for setting a product as out of stock if set to =0 instead of <1. In this case, it will forever stay in stock unless exactly 9 are purchased. If the trigger is set to <1, then no matter the case, as long as 9 or more are sold, it will show out of stock.
Creating a product	Website gives sample fields that are filled with information	Users are not allowed to insert product info but can create a new product. This is inherently wrong because any user shouldn't be able to create a product.
